

WIRELINE

When customers need a wireline crew to acquire logging data and perform efficient perforating operations that will allow fracturing operations to start as soon as possible, C&J's Casedhole Solutions is ready to respond.

With the second largest wireline fleet in the industry, we operate in every basin in the U.S. Our experienced crews work closely with customers to gather accurate data that helps to optimize the recovery from a field. We also provide wireline pump-down operations and well integrity tests.

High-quality perforating, pressure pumping and testing operations ensure an effective and timely completion. Our customized, fit-for-purpose equipment and tools, developed by C&J's in-house Research & Technology group in collaboration with our field services teams, enable us to better meet the challenges of our customers' projects.

As an integrated completions services provider, Casedhole Solutions dovetails with C&J's fracturing and coiled tubing crews to ensure effective pre-job planning and operations that drive a high level of efficiency. Our customers value our responsiveness and decision-making expertise at the wellsite, which saves time and ensures projects will stay on budget.

Our goal is to deliver service excellence on every project.

Our Services

Perforating

We offer premium perforating services, tailored to the needs of each well's completion program. We utilize the most advanced, efficient perforating hardware, much of which is manufactured in-house.

Pipe Recovery

We provide expert pipe recovery services and specialize in deep and highly deviated wells.

Pressure Pumping

Our fleet of highly engineered tractor trailer-mounted pumping units may be utilized for wireline pumpdown, toe prep and first shoot, pressure and injection testing and acid treatment projects. Our self-charging pumping units provide a seamless pumpdown service for horizontal well stage fracturing operations.

Wellsite Make-Up and Pressure Testing

Our modern, trailer-mounted units provide efficient wellsite makeup and pressure testing services that complement our wireline and pressure pumping services for an integrated solution.

Wireline Logging

We offer an array of cased-hole logging services, from collar logs to radial cement bond logs. Our high-quality downhole and surface acquisition equipment is manufactured in-house and provides timely, accurate reports formatted to our customer's specifications.
