

TOE PREP CAPABILITIES

Delivering excellence under pressure in every major U.S. shale basin.

C&J Energy Services provides an advanced fleet of self-boosting pumps to deliver torque-and-test services, acid, chemicals, ball drops, acid transports and backside pumps – when and where you need us. We pioneered the design and use of fit-for-purpose wireline pumpdown trucks, and we're your one-stop shop for toe preps, wireline pumpdowns, workover completions, diverters, tubing pickling and stimulation services. When you hire C&J to service your wells, a team of remarkable people is always part of the package. We're ready to put our experience and expertise to work for you.

Our toe prep capabilities include:

- Toe-sleeve initiation
- First shoot/diagnostic fracture-injection testing
- Injection tests
- Acid spotting
- Pumpdown wireline guns/tools

Why choose C&J to toe prep your well?

- Self-boosting pumps don't require transfer pumps or blenders at your site.
- Portable acquisition systems eliminate the need for data vans.
- Acid docks and transports enable acid treatment with no need for third-party vendors.

To take advantage of our industry-leading toe prep capabilities, contact your C&J representative or visit cjenergy.com.

WE ARE C&J.
