

EXCELLENCE UNDER PRESSURE.

Increase operational productivity and decrease NPT headaches – with the leader in oilfield pumping services.

Pressure pumping has a huge effect on the overall profitability and efficiency of your field operations. That's why you need a provider that brings the right equipment, expertise and dedication to every job. C&J's Casedhole Solutions Pumping service line is focused exclusively on providing exceptional pumping services. That means we always bring dedicated machinery and highly trained people to get your job done right.

More efficient. More reliable. More knowledgeable. Larger fleets for greater availability. Nobody else comes close.

We offer the industry's largest fleet of highly engineered, fit-for-purpose pumping units. These units are self-charging, which eliminates the need for third-party transfer pumps or blenders at your site. To further improve efficiency and reliability, we can mobilize our pressure-pumping services in conjunction with our wireline and fracturing operations. This provides seamless pumpdown services to help optimize your multistage laterals.

Our unmatched inventory and infrastructure means we'll be there when you need us, and we can get up and running quickly for a variety of pumping applications, including:

- Toe prep and first shoot/diagnostic fracture-injection testing
- Pressure and injection testing
- Acidizing and stimulation
- Data acquisition and reporting
- Wireline pumpdown
- Direct chemical injections/ballout equipment
- Torque-and-test services

To boost pumping productivity at your job site, contact your C&J representative, or visit cjenergy.com.

WE ARE C&J.
